2018-05-03 Studies of seals and sealing practices have traditionally investigated aspects of social, political, economic, and ideological systems in ancient societies throughout the Old World. Previously, scholarship has focused on description and documentation, chronology and dynastic histories, administrative function, iconography, and style. More recent studies have emphasized context, production and use, and increasingly, identity, gender, and the social lives of seals, their users, and the artisans who produced them. Using several methodological and theoretical perspectives, this volume presents up-to-date research on seals that is comparative in scope and focus. The cross-cultural and interdisciplinary approach advances our understanding of the significance of an important class of material culture of the ancient world. The volume will serve as an essential resource for scholars, students, and others interested in glyptic studies, seal production and use, and sealing practices in the Ancient Near East, Egypt,

2021-03-08 The Indus civilization flourished for half a millennium from about 2600 to 1900 BCE, when it mysteriously declined and vanished from view. It

remained invisible for almost four thousand years, until its ruins were discovered in the 1920s by British and Indian archaeologists. Today, after almost a century of excavation, it is regarded as the beginning of Indian civilization and possibly the origin of Hinduism. 2015-08-31 This book offers a critical synthesis of the archaeology of South Asia from the Neolithic period (c.6500 BCE), when domestication began, to the spread of Buddhism accompanying the Mauryan Emperor Asoka's reign (third century BCE). The authors examine the growth and character of the Indus civilisation, with its town planning, sophisticated drainage systems, vast cities and international trade.

They also consider the strong cultural links between the Indus civilisation and the second, later period of South Asian urbanism which began in the first millennium BCE and developed through the early first millennium CE. In addition to examining the evidence for emerging urban complexity, this book gives equal weight to interactions between rural and urban communities across South Asia and considers the critical roles played by rural areas in social and economic development. The authors explore how narratives of continuity and transformation have been formulated in analyses of South Asia's Prehistoric and Early Historic archaeological record. 2011 After more than 80 years of research, the Indus Civilization (ca. 2600-1900 BC) remains largely enigmatic. In this geographically extensive civilization, which still has no known monumental art and undeciphered texts, the largest corpus of representational art at many Indus sites is terracotta figurines. The figurines are one of the richest sources of information regarding Indus ideology and society. Unfortunately, the figurines often have been considered selectively without evaluating their archaeological or socio-cultural contexts, resulting in biased interpretations that ignore the richness and diversity of the figurine corpus. Instead, they should be viewed as

media of communication in their original social contexts rather than being viewed simply as naturalistic reflections. This research examines the figurines from the urban site of Harappa (ca. 3300-1700 BC) as reflections of the some of the underlying structures of Indus society and cultural change, focusing particularly on figurines from secure dated archaeological contexts. The figurines are viewed as artifacts whose social lives can be at least partially reconstructed through systematic analyses of stylistic and technological attributes and spatial and temporal contexts (usually fill or trash deposits). Comparisons with ethnographic data, historic texts, and contemporary ancient societies also inform these interpretations. 2021-09-24 Holocene Climate Change and Environment presents detailed, diverse

case studies from a range of environmental and geological regions on the Indian subcontinent which occupies the central part of the monsoon domain. This book examines Holocene events at different time intervals based on a new, high-resolution, multi-proxy records (pollen, spores, NPP, diatoms, grain size characteristics, total organic carbon, carbon/nitrogen ratio, stable isotopes) and other physical tools from all regions of India. It also covers new facilities in chronological study and luminescence dating, which have added a new dimension toward understanding the Holocene glacial retreats evolution of coastal landforms, landscape dynamics and human evolution. Each chapter is presented with a unified structure for ease of access and application, including an introduction, geographic details, field work and sampling techniques, methods, results and discussion. This detailed examination of such an important region provides key insights in climate modeling and global prediction systems. - Provides data and research from environmentally and geologically diverse regions across the Indian subcontinent - Presents an integrated and interdisciplinary approach, including considerations of human impacts - Features detailed case studies that include methods and data, allowing for applications related to research and global modeling Indus water isotopic composition Pande et al 2000 Sharma et al 2017 in Ladakh presently shows 26 2600 cal yr BP although the westerly has been a dominant precipitation source in the

2018-11-03 This volume discusses recent advancements to the age old practice of using microbial enzymes in the preparation of food. Written by leading experts in the field, it discusses novel enzymes and their applications in the industrial preparation of food to improve taste and texture, while reducing cost and increasing consistency. This book will be of interest to both researchers and students working in food technology. 2017-01-05 Indus Seals (2600-1900 BCE) Beyond Geometry: A New Approach to Break an Old Code is a pioneering work which draws attention to the languages and culture of the Indus region for a better understanding of its ancient Indus seals. The signs and symbols inscribed on the seals are considered to be an ancient script which is yet to be deciphered. However, the seals are also imbued with images of animals, humans, deities, trees and unidentifiable objects. Hence, apart from depicting the script they also symbolize an assortment of social, cultural and ideological content which requires a holistic approach for its interpretation. This book looks for clues in

three latent sources to establish the socio-cultural context of the seal images: it seeks ancient words retained in the Sindhi language and relates them to the seal images; it highlights the symbols of Buddhism, Jainism and Hinduism on the seals and traces the roots of the philosophy of nonviolence in ancient Indus cities; and it examines the geometric principles and patterns of seals to study the significance of geometry in the Indus Civilization. The book, through a few examples, demonstrates that these seemingly diverse means can eventually converge to present a clearer picture of a small fraction of the seal iconography. Hence, the book also emphasizes to explore more sources to understand the multiple facets of the seals. Indus Seals (2600-1900 BCE) Beyond Geometry: A New Approach to Break an Old Code is Talpur's third book on the Indus Civilization. It is a companion to her last book Moen jo Daro: Metropolis of the Indus Civilization (2600-1900 BCE) and it is an update to her previous research covered in Evidence of Geometry in Indus Valley Civilization, her first book on this subject. Hence the book also emphasizes to explore more sources to understand the multiple facets of the seals Indus Seals 2600 1900 BCE Beyond Geometry A New Approach to Break an Old Code is Talpurs third book on the Indus Civilization
