Pot makes exercise fun. The link between performance enhancement and cannabis has been an open secret for many years, so

much so that with the wide-sweeping national legalization of cannabis, combining weed and working out has become the hottest new wellness trend. Why, then, is there still a skewed perception around this leafy substance that it only produces the lazy, red-eyed stoner laid out on a couch somewhere, munching on junk food? In fact, scientists have conducted extensive research that uncovers the power of the runner's high—the true holy grail of aerobic activity that was long believed to be caused by endorphins. In an extraordinary reversal, scientists believe marijuana may actually be the key to getting more Americans off their phones and on to their feet. In *Runner's High*, seasoned investigative journalist Josiah Hesse takes readers on a journey through the secret world of stoned athletes, describing astounding, cannabis-inspired physical and mental transformations, just like he experienced. From the economics of the \$20 billion CBD market to the inherent inequalities in the enforcement of marijuana prohibition; from the mind-body connection behind the runner's high to the best way to make your own cannabis-infused power bars; *Runner's High* takes this groundbreaking science out of the lab and onto the trail, court, field, and pitch, fundamentally changing the way we think about exercise, recovery, and cannabis. 2009 Contracts relating to scientific/technical development are effective only where they are enforceable or valid under relevant law, can be practically

implemented by the parties, and address matters arising from the relevant scientific/technical issues and practices. Negotiators are often hampered by their lack of knowledge of contract law and of the biotechnological techniques used to derive new molecules and genes or genetic or biochemical formulas from biological samples. 2011 A substantive literature suggests that migration generates benefits for migrants, the host societies, and the countries of origin. The economic benefits for the countries of origin are realized primarily through the receipt of remittances. These large and stable resource flows remained relatively resilient during the global financial crisis compared to steep declines in private capital flows, and they have quickly recovered to the pre crisis levels. African countries are estimated to have received \$40 billion in officially recorded flows in 2010, but the true size is believed to be far larger. Remittances are associated with reduction in poverty, improved education and health

outcomes, and increased availability of funds for small business investments. Remittances represent a positive and relatively noncontroversial outcome of migration. This volume brings together studies of remittance markets in eight Sub-Saharan African countries and two key destinations for African migrants outside the African continent. It provides an overview of the remittance markets, and the policy and institutional environments in both sending and receiving countries. Based on primary surveys of remittance service providers about the types of remittance services, barriers to entry and exit, legal and regulatory environment, remittance costs, and innovative technologies, the chapters of this volume provide a unique window into the functioning of remittance markets in this region. the volume, measures to reduce remittance fees, increase market competition and consumer protection, increase the involvement of post offices and other non-bank institutions, and encourage the extension of mobile money transfer services to cross-border remittances will benefit the ultimate clients, the people of Africa. I hope that the findings of this volume will motivate more research, improved data collection, and policy action in the area of migrant remittances in Africa. 2010-01-07 Conservation Biology for All provides cutting-edge but basic conservation science to a global readership. A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting-edge conservation knowledge as widely as possible. Important topics such as balancing conservation and human needs, climate change, conservation planning, designing and analyzing conservation research, ecosystem services, endangered species management, extinctions, fire, habitat loss, and invasive species are covered. Numerous textboxes describing additional relevant material or case studies are also included. The global biodiversity crisis is now unstoppable; what can be saved in the developing world will require an educated constituency in both the developing and developed world. Habitat loss is particularly acute in developing countries, which is of special concern because it tends to be these locations where the greatest species diversity and richest centres of endemism are to be found. Sadly, developing world conservation scientists have found it difficult to access an authoritative textbook, which is

particularly ironic since it is these countries where the potential benefits of knowledge application are greatest. There is now an urgent need to educate the next generation of scientists in developing countries, so that they are in a better position to protect their natural resources.
